### Alert details

## HTML form without CSRF protection

Severity	Medium
Туре	Informational
Reported by module	Crawler

### **Description**

This alert may be a false positive, manual confirmation is required.

Cross-site request forgery, also known as a one-click attack or session riding and abbreviated as CSRF or XSRF, is a type of malicious exploit of a website whereby unauthorized commands are transmitted from a user that the website trusts.

Acunetix WVS found a HTML form with no apparent CSRF protection implemented. Consult details for more information about the affected HTML form.

#### **Impact**

An attacker may force the users of a web application to execute actions of the attacker's choosing. A successful CSRF exploit can compromise end user data and operation in case of normal user. If the targeted end user is the administrator account, this can compromise the entire web application.

### Recommendation

Check if this form requires CSRF protection and implement CSRF countermeasures if necessary.

### Possible sensitive files

Severity	Low	
Туре	Validation	
Reported by module	Scripting (Possible_Sensitive_Files.script)	

### **Description**

A possible sensitive file has been found. This file is not directly linked from the website. This check looks for common sensitive resources like password files, configuration files, log files, include files, statistics data, database dumps. Each one of these files could help an attacker to learn more about his target.

### **Impact**

This file may expose sensitive information that could help a malicious user to prepare more advanced attacks.

### Recommendation

Restrict access to this file or remove it from the website.

### Email address found

Severity	Informational
Туре	Informational
Reported by module	Scripting (Invalid_Page_Text_Search.script)

### **Description**

One or more email addresses have been found on this page. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

### **Impact**

Email addresses posted on Web sites may attract spam.

#### Recommendation

Check references for details on how to solve this problem.
